Synopsis of Human Anatomy and Physiology 13 2021

Taking a modular approach, this comprehensive text covers human anatomy and physiology. It includes chapter summaries, activities, essay questions and labelling exercises.

Arrowsmith Aug 04 2020 This satirical novel by the Nobel Prize-winning author of *It Can't Happen Here* examines medicine in the modern world through the eyes of an idealistic man. The assistant of a small-town midwestern doctor, young Martin Arrowsmith is fascinated with the contents of Gray's Anatomy. Eager to pursue an adventurous career in medicine and science, he eventually sets off for medical school, where he hopes to dedicate himself to research. But as Martin progresses through life he encounters qualities in humans more troublesome than any of the specimens he examines under a microscope. Happiness almost eludes him until his mentor offers him a post at a prestigious institute—which soon sends Martin to a plague-ravaged Caribbean island. There he must show what he is truly made of . . . A perennial favorite of medical

students to this day, Arrowsmith won author Sinclair Lewis the Pulitzer Prize in 1926, which he declined. "Beyond doubt the best of Mr. Lewis's novels . . . Absorbing and illuminating." —The Spectator

Being a Beast Mar 30 2020 LONGLISTED FOR THE BAILLIE GIFFORD PRIZE 2016 Charles Foster wanted to know what it was like to be a beast: a badger, an otter,

deer, a fox, a swift. What it was really like. And through knowing what it was like he wanted to get down and gr with the beast in us all. So he tried it out; he lived life a badger for six weeks, sleeping in a dirt hole and eating earthworms, he came face to face with shrimps as he li like an otter and he spent hours curled up in a back garc in East London and rooting in bins like an urban fox. A passionate naturalist, Foster realises that every creature creates a different world in its brain and lives in that wo As humans, we share sensory outputs, lights, smells and sound, but trying to explore what it is actually like to liv another of these worlds, belonging to another species, i fascinating and unique neuro-scientific challenge. For Foster it is also a literary challenge. Looking at what sci can tell us about what happens in a fox's or badger's br when it picks up a scent, he then uses this to imagine t world for us, to write it through their eyes or rather thr the eyes of Charles the beast. An intimate look at the lif animals, neuroscience, psychology, nature writing, memc and more, it is a journey of extraordinary thrills and surprises, containing wonderful moments of humour and joy, but also providing important lessons for all of us wh share life on this precious planet.

Surviving the Extremes Jul 03 2020 Surgeon, VP of The Explorer's Club, veteran of Everest climbs (such as the one documented in INTO THIN AIR, on which he was attending as a physician). NASA consultant and the world's foremost extreme doctor, Ken Kamler knows what happens when human bodies are pushed to their limits and beyond. He has hunkered down from ice crevasses and pushed himself into pitch-black underwater caves, and seen who survived and who didn't. There are those who can cut off their arms to save their lives and those who cannot. This captivating book takes readers into six environments: underwater, water surface, jungle

desert, high altitude and outer space. Kamler explores the body's reactions to heat, cold, pressure, starvation and exhaustion and reveals its miraculous survival strategies. Here is a scientific nail-biter that takes readers where no 'reality' television show would dare to go, and proves in intimate, harrowing and unforgettable detail what survival really means.

Nov 06 2020 Body by Design defines the basic anatomy and physiology in each of 11 body systems from a creational viewpoint. Every chapter explores the wonder, beauty, and creation of the human body, giving evidence for creation, while exposing faulty evolutionist reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries while profiling the classic and contemporary scientists and physicians who have made remarkable breakthrough in studies of the different areas of the human body. Body Design is an ideal textbook for Christians high school or college students. It utilizes tables, graphs, focus sections, diagrams, and illustrations to provide clear examples and explanations of the ideas presented. Questions at the end of each chapter challenge the student to think through the evidence presented.
