Some issues have supplement. The Code of Federal Regulations Title 5 contains the codified Federal laws and regulations that are in effect as of the date of the publication relating to senior administrative personnel for each Federal Department and Agency. A lot has changed since 1985, when this landmark collection of human resource forms was last published. New legislation, the ongoing modernization of company practices, and drastic changes in the workplace have led to a slew of new challenges for HR professionals. Forms Used in Human Resources tackles these challenges head on. It is fully revised with up-to-date forms for areas such as domestic

partnership, the ethical use of computer software, and requests for translation services. Forms Used in Human Resources is for anyone faced with the difficult task of creating or redesigning human resources forms. It features contributions from over 55 U.S. and Canadian companies and includes 350 commonly used HR forms. It can be used as a source to create new forms or as a standard for evaluating your company's current forms with those used by others. Forms in this book have been designed to meet the needs of the companies using them. They have already been put to use by companies such as the Principal Financial Group, the Southwestern Life Corporation and Mutual of New York, so you know they work well in the workplace. And with so comprehensive a source, there is no longer any need to spend hours doing research or struggling to create a new form. Practical examples are right there at your fingertips—examples that will save you valuable time and money. "There are three main types of money: currency, bank deposits, and central bank reserves. ...Most money in the modern economy is in the form of bank deposits, which are created by commercial banks themselves." Bank of England, Money in the Modern Economy (2014) "The most outstanding fact of the last depression is the destruction of 8 billion dollars - over a third - of our "check-book money" - demand deposits." Irving Fisher, 100% Money and the Public Debt (1936) "The process by which banks create money is so simple that the mind is repelled." John K Galbraith, Money: Whence it Came, Where it Went (1975) Commercial banks create the money supply in the form of the deposit account money supply: by making repayable loans of newly-created bank deposits to private sector loan account debtors and to government bond debtors. Making a bank loan or bond purchase creates a linked pair of credits/debts: a new spendable, cashable, credit balance (a new bank deposit: e.g. +\$1000) in the debtor's bank deposit account; and an equal new interest-bearing debt balance (-\$1000) in the debtor's bank loan or bond account. Debtors spend their new bank loans and bond sale proceeds. Debtors pay the new bank deposits to payees -- by check, direct deposit, online banking, debit card, etc -- within the bank-operated payments system. The new credit balances are debited out of the debtors' bank deposit account balances and credited into the first payees' bank deposit account balances. That's where the deposit account money supply -- the spendable, investible, saveable (and cashable) credit balances in our bank deposit accounts -- comes from, in the first place. Then payees create the spendable cash money supply by making cash withdrawals, and paying with debits to our deposit account credit balances. But most bank deposits are never cashed out. Most money never exists in any other form than credit balances -- bank deposits: the deposit account money supply -- in payees' bank deposit accounts. Debtors owe the deposit account money supply back to their creditor-banks, as payment of the debtors' loan account and bond debt balances. Repaying a bank loan, or redeeming a bank-held bond, un-creates -- extinguishes; cancels out to \$0/\$0 -- the deposit account credit balance (+\$1000) and the loan account or bond debt balance (-\$1000) that were created by making the bank loan or bond purchase. But debtors can't pay their debt balances because payees have all the credit balances. The Road to Debt Bondage describes in plain language how the commercial banks' creditor-assets/debtor-liabilities "balance sheet" money supply creation system works; and how it creates ever-increasing totals of creditors' uncollectable credit balances owed as debtors' unpayable debt balances (1914-1929; 1939-2008) until the banking system

Collapses in financial crisis. Financial crisis is historically resolved by writing off our deposit account credit balances to relieve the commercial banking system of its unpayable deposit liability debt balances. Which is what bankruptcy Trustees did in the 1930s. And which the Dodd-Frank debt-for-equity swaps program (depositor bail-ins) plans to do this time. Which plunges the spending-driven producer-consumer economy into Debt-Deflation Depression by writing off ruinous amounts of commercial banks' unpayable deposit liability debts -- which used to be our spendable deposit account "money supply". The book shows how monetary system reform -- government issuance of debt-free (non-repayable) money that breaks the banks' longstanding monopoly of debt-based money supply issuance -- can make debtors' unpayable debts payable, which makes banks' uncollectable earning assets collectable, which makes banks' unpayable deposit liability debts payable, which prevents the otherwise inevitable banking system failure and eliminates the need to write off our "money in the bank".

The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government. Where does money come from? Why is there so much debt? Every government on Earth is a billionaire or trillionaire bond debtor, not a rich as Midas money printer. Everybody knows that. In the Fifty Years Ago Today section of daily newspapers, headlines warn of alarming and increasing levels of government deficits and debts. Government-issued debt is front page news, everywhere, and has been for a very long time. Yet most people continue to believe the government issues the money. "There are three main types of money: currency, bank deposits, and central bank reserves. ... Most money in the modern economy is in the form of bank deposits, which are created by commercial banks themselves." {Bank of England, Money in the Modern Economy (2014)} Private commercial banks - not governments; not central banks - issue the money supply of nations by lending it into existence. Commercial banks create money in the form of bank deposits - spendable bank deposit account balances, in borrowers' bank deposit accounts. People, businesses and governments who borrow and spend money that is created by banks are "debtors" who owe the borrowed money back to the banks. Debtors pay the new balances to payees - by check, direct deposit, online banking, debit card, etc - within the central-commercial bank-operated payments system of debiting payer accounts and crediting payee accounts. The new balances are debited out of the debtors' bank deposit accounts and credited into the first payees' bank deposit accounts. That's where the deposit account money supply - the spendable, investible, savable (and cashable) balances in our bank deposit accounts - comes from, in the first place. Then payees create the spendable cash money supply when we make cash withdrawals, and pay with debits to our deposit account balances. But most bank deposits are never cashed out. Most money never exists in any other form than balances in payees' bank deposit accounts. Debtors owe all the deposit account money balances back to their banks as payment of the debtors' loan account and bond debt balances. Repaying a bank loan (or redeeming a bank-held bond) un-creates - extinguishes; cancels out to \$0/\$0 - the deposit account money balance, and the loan or bond account debt balance, that were created by making the bank loan or bond purchase. The deposit account money supply - which is about 97% of all money that exists - only exists so long as debtors' debts remain unpaid. But debtors can't pay their loan account and bond debts because payees have all the deposit account money; which we are using as our spendable, investible, savable "money supply". The commercial banks' "repayable bank loan and bond purchase" money supply

creation monopoly systematically creates unpayable debts. The banks' debt-based money system creates ever-increasing totals of payees' bank deposit account balances that are owed back to banks as payment of debtors' ever-increasing totals of unpayable loan account and bond debt balances; until debtors finally default en masse and the banking system descends into a financial crisis of creditors' uncollectable money owed as debtors' unpayable debts. This booklet describes how commercial banks create the spendable money supply; how central banks create the base money supply; and how the money-using people, businesses and governments of the world sink into ever-deeper pits of unpayable debt bondage. It doesn't have to be this way. Seeing how the banks' debt-based money creation monopoly works, exposes why it fails, and illuminates the technically simple way to fix it: add debt-free government-issued "helicopter money" into the banks' debt-based money supply. Ben Franklin's colonial government did it. Abraham Lincoln's Civil War government did it. We can do it too. Automatic offers an innovative new way to think about how Americans can save for retirement. Over the past quarter century, America's pension system has shifted away from defined benefit plans and toward defined contribution savings programs such as 401(k)s and IRAs. There is much to be done to improve the defined contribution system. Many workers fail to participate and those who do often contribute too little, invest the funds poorly, and are not adequately prepared to manage funds while in retirement. To resolve these problems, the authors propose that employees should be automatically enrolled into a 401(k) plan when they are hired, with the right to opt out, change the amount that they contribute, or change investment choices if they choose. If the employer does not sponsor a 401(k) or similar retirement plan, they would be enrolled in a payroll deduction Automatic IRA. This vision of a transformed defined contribution system incorporates key positive features of defined benefit plans to improve retirement security. Employers' contributions would increase over time, their investments would benefit from professional management and rebalancing, and they would receive lifetime income upon retirement. These automatic features will make the 401(k) and similar plans a more effective tool for retirement saving, and they can be extended to the many workers who do not currently have access to an employer plan. In Automatic, the authors present proposals to implement automatic features in all phases of the 401(k) and in IRAs for workers with no employer plan. They also draw from the experience of countries that have implemented automatic saving structures.
