Towards a Systemic Model for Terminology Planning Jun 26 2022 Previous work on terminology planning can be, more or less, divided into general guidelines, local planning, and translation-based activities. This book, however, by avoiding this line of research and any kind of prescription, represents a movement towards generalisation as a prerequisite of theorisation. Its research is predicated on the hypothesis that all terminological activities are founded upon some fundamental principles, which, at the same time, are manifested through context-bound variations or parameters. A particular advantage of the book is its employing of both field research and a review of research literature. The former allows it to carry out a comparative study by using a maximum variation sampling technique for gathering data from four language agencies of different ecolinguistic situations, namely Termcat (Catalan), TNC (Swedish), DGLFLF (French), and the Academy of Persian Language and Literature in Iran. In order to this, it uses a questionnaire concentrating on the macro- and micro-structures of the target organisations as a route map. The literature review allows the book to benefit from research documents from more than thirty sociolinguistic communities. The book's unique feature includes the introduction of new concepts such as linguistics of science, systemic terminology, systemic planning, terminology argumentation, and sociocognitive terminometrics, among others. A further distinguishing feature is the fact that it discusses terminology not in a vacuum, but as a component of the language of science system.

Computational Linguistics and Intelligent Text Processing Jan 28 2020 This two-volume set, consisting of LNCS 7181 and LNCS 7182, constitutes the thoroughly refereed proceedings of the 13th International Conference on Computer Linguistics and Intelligent Processing, held in New Delhi, India, in March 2012. The total of 92 full papers were carefully reviewed and selected for inclusion in the proceedings. The contents have been ordered according to the following topical sections: NLP system

architecture; lexical resources; morphology and syntax; word sense disambiguation and named entity recognition; semantics and discourse; sentiment analysis, opinion mining, and emotions; natural language generation; machine translation and multilingualism; text categorization and clustering; information extraction and text mining; information retrieval and question answering; document summarization; and applications.

[Theoretical Perspectives on Terminology](#) May 02 2020 The aim of this volume is to provide an overview of different theoretical perspectives on Terminology, from Wüster to other initiatives that have emerged since the beginning of the 1990s. The volume also covers important topics which have significantly influenced Terminology and its evolution. These include variation, multidimensionality, conceptual relations, and equivalence, among others. The twenty-two chapters of the volume, all written by acknowledged experts in the field, explore the questions that different approaches seek to answer. They also describe the theoretical and methodological principles that were devised over the years to characterize, analyze, and represent terminological data. The semi-chronological, semi-thematic organization of chapters not only provides readers with a clear vision of the evolution of ideas in Terminology, but also gives them an understanding as to why some of these ideas were initially challenged. In addition to being accessible to readers unfamiliar with the basic theoretical principles in the field, the chapters provide a showcase of current research in the field, the challenges looming on the horizon, and finally future directions in terminological research. By bringing together work that is often disseminated in different forums and written in different languages, this volume provides a unique opportunity to look at how different theoretical approaches to Terminology offer complementary perspectives on terms, concepts and specialized knowledge, and help to further a better understanding of the complex phenomena that terminologists must successfully deal with in their work.

New Directions in Question Answering Mar 24 2022 Major trends in the development of an important new method of information access that combines elements of natural language processing, information retrieval, and human computer interaction. Question answering systems, which provide natural language responses to natural language queries, are the subject of rapidly advancing research encompassing both academic study and commercial applications, the most well-known of which is the search engine Ask Jeeves. Question answering draws on different fields and technologies, including natural language processing, information retrieval, explanation generation, and human computer interaction. Question answering creates an important new method of information access and can be seen as the natural step beyond such standard Web search methods as keyword query and document retrieval. This collection charts significant new directions in the field, including temporal, spatial, definitional, biographical, multimedia, and multilingual question answering. After an introduction that defines essential terminology and provides a roadmap to future trends, the book covers key areas of research and development. These include current methods, architecture requirements, and the history of question answering on the Web; the development of systems to address new types of questions; interactivity, which is often required for clarification of questions or answers; reuse of answers; advanced methods; and knowledge representation and reasoning used to support question answering. Each section contains an introduction that summarizes the chapters included and places them in context, relating them to the other chapters in the book as well as to the existing literature in the field and assessing the problems and challenges that remain.
